

# **Field of Study: Industrial Engineering and Management**

## **Programme of studies: Systems and Technological Equipments Optimization**

### **First year of study:**

#### **Subject of study: Advanced techniques for materials investigating**

**CODE: D22OPEM101**

**Number of credits: 5**

**Year/Semester: 1<sup>st</sup> year , 1<sup>st</sup> semester**

**Type of Course: mandatory**

**Objectives:** Knowledge of the main materials analysis techniques, metallic and advanced, with the help of which their properties are highlighted. The manufacturing technologies, properties, structure, defects and characteristic transformations of materials are analyzed.

**Content:** Properties and Material Testing; Advanced techniques for obtaining metallic samples; Modern techniques for measuring the temperature of metallic materials. Modern techniques for studying the phases and metalographic constituents. Spectrometric analysis X-ray diffraction analysis. Modern optical microscopy. Quantitative metallographic determinations. Techniques of investigation by electronic microscopy

**Evaluation:** written/ oral examination

#### **Subject of study: Processes for joining of advanced materials**

**CODE: D22OPEM102**

**NUMBER OF CREDITS: 5**

**YEAR/SEMESTER: 1<sup>st</sup> year/1<sup>st</sup> semester**

**TYPE OF COURSE: mandatory**

**OBJECTIVES:** The presentation of the terminology specific to the modern joining processes and the materials used. Understanding the notions of weldability of materials and principles underlying each joining process.

**CONTENT:** Classification of advanced materials. Classification of joining procedures (EN, AWS). The physical model of melt welding. The physical model of the bonding process. Modern processes for joining of the advanced materials. Particularities regarding the joining of advanced materials.Quality assurance for joining of advanced materials.

**TEACHING LANGUAGE:** Romanian

**EVALUATION:** Written/oral examination

**Subject of study: Programming of the production systems with numerical control****CODE: D22OPETM103****Number of credits:** 6**Year/Semester:** 1<sup>st</sup> year , 1<sup>st</sup> semester**Type of Course:**mandatory

**Objectives:** The course provides to the students theoretical and practical basics to programming CN production systems, respectively knowing the G-code programming language ISO

**Content:**Introduction. Definitions. Activities performed before encoding information.Types of phrases. The format of a phrase. References Systems.Axes and movements of MUCN. Functions G04 and G09, respectively G00, G01, G02, G03. Description. Format phrase. Examples. Application to machining centers by milling and turning. Group 02 functions (XY, XZ, YZ work plan selection): G17, G18 and G19. Group 03 functions: Absolute / incremental machining (G90 / G91). Group 07 functions: G40, G41 and G42. Canned cycles: Drilling: G73, G81, G82, G83. Threading : G74 and G84. Bore cycles: G85, G86, G87, G88, G89. G80 cancellation function . Cycles for frontal grooving and drilling and chips breaking, Function G74. Repetitive Turning Cycles, Functions G71, G72 and G73. Finishing Cycle, Function G70. Functions M35. G84 and M35 - G88 functions for rigid threadings. M98 and M99 functions. Activate / deactivate axis C. Functions M10- M11 (M19-M20). Interpolation in Polar Coordinates, X - C, Turning, Functions G112 and G113.

Z-C axis cylindrical interpolation in turning, Machining using B axis, Functions M91 and M92 - deactivation and activation of the B axis. Functions M61, M62. Functions M64 and M65

**Subject of study: Researches basics****CODE: D22OPEM104****Number of credits:** 5**Year/Semester:** 1<sup>st</sup> year , 1<sup>st</sup> semester**Type of Course:**mandatory

**Objectives:** Presentation of the basic principles of the various methods and means of measuring the quantities that characterize the technological processes

**Content:** Measurement basics. Measuring systems. Parametric and Generators transducers. Electrical Tensometry. Fotoelasticimetry. Experimental Measurement of stress and deformations. Circuits for the transducers connecting. Statistical processing of experimental data. Methods of measuring displacements. Speed measurement methods. Methods of measuring forces, moments, power, temperature, pressure. Methods and principles for measuring surface roughness. Vibration measurement methods in mechanical systems

#### **Subject of study: Ethics and academics integrity**

**CODE:** D22OPEM105

**Number of credits:** 4

**Year/Semester:** 1<sup>st</sup> year , 1<sup>st</sup> semester

**Type of Course:** mandatory

#### **Subject of study: Scientific research/Practice**

**CODE:** D22OPEM106/ D22OPEM212

**Number of credits:** 5-1<sup>st</sup> semester/7-2<sup>nd</sup> semester

**Year/Semester:** 1<sup>st</sup> year , 1<sup>st</sup> and 2<sup>nd</sup> semester

**Type of Course:** mandatory

**Objectives:** Knowing the terminology specific to the research activity, how to make a complex technical documentation and how to draw up and draft a research project

**Content:** Introduction. Basic concepts of scientific research. Terminology. National and European legislation .

The general model of a research project. Thematic orientations in European research. European platforms, priority axes.

Management of the research project.

The ways to capitalize on research results

**Teaching Leanguage:** Romanian

**Evaluation:** written/ oral examination

#### **Subject of study: Integrated design of the cutting tools**

**CODE:** D22OPEM107

**NUMBER OF CREDITS:** 7

**YEAR/SEMESTER:** 1<sup>st</sup> year/2<sup>nd</sup> semester

**TYPE OF COURSE:** mandatory

**OBJECTIVES:** To transfer to the students the practical and theoretical knowledges about the storage, manipulation and presetting the tolling systems for CNC machining centers. For this purpose the tolling systems are defined, classified, and, then, aspects regarding the design are presented.

**CONTENT:** Special tools for CNC machining centers; Tooling systems for CNC machining center (for CNC lathes machines, for VMC); Methods and systems for the tool presetting. Tools storages systems. Tool codification.

**TEACHING LANGUAGE:** Romanian

**EVALUATION:** Written/oral examination

#### **Subject of study: Advanced technologies in powder metallurgy**

**CODE:** D22OPEM208

**NUMBER OF CREDITS:** 6

**YEAR/SEMESTER:** 1<sup>st</sup> year / 2<sup>nd</sup> semester.

**TYPE OF COURSE:** mandatory

**OBJECTIVES:** The course provides students with theoretical and practical concepts on technology development of powder metallurgy parts.

**CONTENT:** Methods of making metal powders; physical, chemical, mechanical and technological properties of powders; methods of compaction of powders; sintering the compacted raw products; operations after sintering; powder metallurgy parts: bearings, filters, brushes, magnets, electrical contacts, dental implants.

**TEACHING LANGUAGE:** Romanian

**EVALUATION:** Written examination

**Subject of study: Quality engineering**

**CODE:** D22OPEM209

**NUMBER OF CREDITS:** 5

**YEAR/SEMESTER:** 1<sup>st</sup> year/ 2<sup>nd</sup> semester

**TYPE OF COURSE:** mandatory

**OBJECTIVES:** The course provides students with theoretical and practical concepts for the formation of advanced knowledge and practical skills to use modern methods of quality control. The aim of the course is to acquire contemporary computer technology for quality control and analysis of manufacturing processes, and, also, theoretical and practical skills training using modern methods of statistical quality control.

**CONTENT:** Indices of quality, Measurement methods of quality indicators, Statistical Methods of Quality Control, Fundamentals of Statistics-Concepts, Sightings, structuring and presenting of statistical series, Statistical methods of quality control. Statistical Methods for regulating processes, Key Aspects of Control Processes, Methods for calculating reliability indices based on test trials, Current quality control, Statistical Process Control – SPC, Aspects about Process Quality Control- PQC, Methods for Solving of Quality Troubleshootings, Process Capability, Performance and Improvement

**Subject of study : Logistics**

**CODE:** D22OPEM211

**CREDIT POINTS:** 5

**YEAR/SEMESTER:** 1<sup>st</sup> year/ 2<sup>nd</sup> semester

**TYPE OF DISCIPLINE:** optional

**OBJECTIVES:** The main objective of this course is making an analysis in a coherent approach of the logistic system of a factory, the material fluxes, the delivery circuits and storage networks, together with the study of network locations.

**CONTANT:** Logistic system. Activities, structure and functions. Elaborating the manipulation, storage and intern transport technologies. Concepts of designing the disposal of logistic system components. Forming of the packed load units. Design elements. Forming the pallet loadings units, containerized and transcontainerized. Storages, deposit systems and thechnical organisatoric activities. Functions of logistic storage subsystem. The coordination of logistic storage subsystems with working subsystems. Mechanization, automation and robotisation of internal transport processes. Mechanical and automated conveyor. Special transport equipment. Road transportation systems. Road, railway maritime and fluvial transportation systems. Optimizing transport itineraries. Time of manufacturing cycle. Aspects of synchronising operations. The distribution of material fluxes within the logistic system. Location problem inside the internal logistic system.

**LANGUAGE:** Romanian

**EVALUATION:** written examination

## Second year of study:

### Subject of study: Simulation of the integrated production systems

CODE: D22OPEM319

NUMBER OF CREDITS: 5

YEAR/SEMESTER: 2<sup>nd</sup> year/1<sup>st</sup> semester

TYPE OF COURSE: mandatory

**OBJECTIVES:** Discipline "Simulation of logistics flows" aims to familiarize students in master classes with components, devices, systems control and programming of robots, automated storage, automated guided vehicle systems integrated manufacturing systems. It presents modeling and simulation software organization and operation of integrated interoperable logistics flows in advanced manufacturing systems.

**CONTENT:** Notions of systems theory. Artificial intelligence elements used in integrated production systems. Hipersisteme CIM. Concept design and technology aided integrated manufacturing systems. Flexible manufacturing systems. Automatic deposits of integrated production systems. Robot integrated manufacturing systems. Automated guided vehicle systems integrated manufacturing systems. Quality assurance and testing of computer aided. Interoperable logistics applications integrated production systems. Modeling and simulation of computer-aided manufacturing. Modeling and simulation of a flexible manufacturing system using computer modeling systems. POST principles CIM. Notions of systems theory. Artificial intelligence elements used in integrated production systems. Simulation of integrated manufacturing systems and interoperable logistics flows.

**TEACHING LANGUAGE:** Romanian

**EVALUATION:** Written examination

### Subject of study: Optimization of the technological processes

CODE: D22OPEM320

NUMBER OF CREDITS: 4

YEAR/SEMESTER: 2<sup>nd</sup> year/1<sup>st</sup> semester

TYPE OF COURSE: mandatory.

**OBJECTIVES:** acquiring the knowledge needed to optimize the technological process.

**CONTENT:** Methods of assessing the machinability by cutting the materials in order to optimize the technological processes. Methodology of determining the necessary restrictive relationships for optimization. Optimization of different machining processes. Criteria for optimizing the cutting parameters. Methods for solving linear and nonlinear optimization problems. Methods of determining the optimal technological process

**TEACHING LANGUAGE:** Romanian

**EVALUATION:** Written exam.

**SUBJECT OF STUDY:** The optimisation of reconditioning process**CODE:** D22OPEM321**NUMBER OF CREDITS:** 4**YEAR/SEMESTER:** 2<sup>nd</sup> year/1<sup>st</sup> semester**TYPE OF COURSE:** of specialty, unavoidable**OBJECTIVES:** The course present to students ways of reconditioning and recycling of reusable materials with direct implication in technology's design and equipments for obtaining basic materials, from waste.**CONTENT:** Reconditioning and recycling metallic waste from machine industry. Specific technological process. Recycling of foundry compounds and caste iron and steel waste. Recycling of grinding cattings. Reconditioning and recycling for textile and glass fibres.

Reconditioning and recycling for waste paper. Reconditioning and recycling of plastics and polymers from rubber tyre. Reconditioning and recycling of garbage. Parts' recycling by restoring, disturbance of pieces type : shaft, bushing, gab, gear pinion. Reconditioning of pieces type carcass using HELI-COIL and METALOCK methods.

**Subject of study: Optimization of mobile mechanical systems****CODE:** D22OPEM324**Number of credits:** 5**Year/Semester:** 2<sup>nd</sup> year , 1<sup>st</sup> semester**Type of Course:** optional**Objectives:** Learning by the students of the theoretical and instrumental methods, means and procedures for the optimization of mobile mechanical systems.**Content:** Kinematic and dynamics modeling by computational methods of mobile mechanical systems. General Aspects of Optimizing Problems. Numerical methods to solve minimal and maximum problems. Topological optimization (constructive) by the finite element method of mechanical structures. Solving optimization problems with and without constraints (restriction functions). Theoretical aspects on multiple objective optimization problems. Theoretical aspects regarding the stability of dynamic systems (Lyapunov stability of systems). System optimization issues. Theoretical aspects regarding the use of software for the optimization of mobile mechanical systems (ADAMS, ANSYS). Application study on the optimization of a mobile mechanical system by parametric methods**Teaching Language:** Romanian**Evaluation:** written/ oral examination**Bibliography:**

#### **Subject of study: Scientific research/Practice**

**CODE:** D22OPEM325

**Number of credits:** 7

**Year/Semester:** 2<sup>nd</sup> year , 1<sup>st</sup> semester

**Type of Course:** mandatory

**Objectives:** Knowing the terminology specific to the research activity, how to make a complex technical

documentation and how to draw up and draft a research project

**Content:** Introduction. Basic concepts of scientific research. Terminology. National and European legislation .

The general model of a research project. Thematic orientations in European research. European platforms, priority axes.

Management of the research project.

The ways to capitalize on research results

**Teaching Language:** Romanian

**Evaluation:** written/ oral examination

#### **Bibliography:**
